PROFESSIONAL SUMMARY

Full-stack developer with 2 years of production experience building scalable .NET Core / ASP.NET backends and Angular UI components, plus hands-on experience shipping AI-integrated applications end to end — including a React Native app with a Retrieval-Augmented Generation (RAG) coaching assistant built on Google Gemini, Groq, and Supabase pgvector. Comfortable owning a feature from database schema through UI to LLM integration.

SKILLS

Languages: C#, JavaScript, TypeScript

Backend: .NET Core, ASP.NET MVC, ASP.NET Web API, WCF, Entity Framework, LINQ, RESTful API design

Frontend: React, React Native, Angular, jQuery, Bootstrap, HTML5, CSS3

Database & Cache: SQL Server, PostgreSQL (Supabase), MongoDB, Redis Cache, pgvector

AI / LLM: Google Gemini API, Groq API, Retrieval-Augmented Generation (RAG), agentic tool-calling, embeddings

Messaging: SignalR, RabbitMQ

Tools & DevOps: Git, GitHub, GitLab, Jira, SSMS, Jest, EAS Build, Supabase Edge Functions

WORK EXPERIENCE

Software Engineer — Coditas, Pune, India | August 2024 - Present

- Scaled ASP.NET Core REST APIs serving reporting and calling workflows for a high-traffic production system used by thousands of users.
- Boosted large-scale operations efficiency by 40% by shipping Bulk Assignment Upload, Bulk Data Update, and automated reporting features, building both the .NET Core backend services and the Angular UI components.
- Cut API request processing time by 25% by refactoring the backend filter pipeline into a modular, testable architecture.
- Resolved 50+ production and pre-production defects by pairing with QA and product teams, improving system stability and reducing recurring incidents.
- Delivered business-critical backend enhancements ahead of schedule, reducing delivery timelines by 20% and earning direct client appreciation.
- Ran two-week Agile sprints with GitLab version control and Jira-tracked backlogs, keeping release cadence predictable across the team.

Associate Software Engineer Intern — Coditas, Pune, India | January 2024 - August 2024

- Built a full-stack Diet Planner application end to end — JWT authentication, role-based authorization, and RESTful CRUD APIs backed by SQL Server.
- Designed a normalized relational schema for user profiles, meal preferences, and nutritional data, improving data consistency and query efficiency.
- Implemented real-time notifications and group messaging using SignalR, increasing application interactivity and user engagement.
- Reduced database load by 35% and improved API response times by integrating Redis caching for frequently accessed data.
- Built a responsive UI with HTML, CSS, JavaScript, and Bootstrap, ensuring smooth usability across devices.

PROJECTS

Stryde — AI-Powered Marathon Training App (Personal Project) — React Native (Expo), TypeScript, Supabase (Postgres/pgvector), Google Gemini, Groq

- Built a cross-platform marathon-training app end to end with React Native and TypeScript, from a rule-based training-plan engine (base-build-peak-taper periodization) to offline-first GPS run tracking with GPX/TCX export.
- Designed and shipped an AI running coach using a hybrid RAG pipeline — Gemini embeddings and Supabase pgvector similarity search combined with Postgres full-text search — grounded in a self-authored knowledge base and the user's own logged activity data.
- Implemented an agentic tool-calling chat loop (Google Gemini primary, Groq fallback) that executes multiple tools concurrently, including a live web-search tool via the Tavily API.
- Modeled a 10-table Postgres schema (profiles, plans, activities, coach_messages, knowledge_base, and more) across 29 incremental Supabase migrations.
- Covered the training-plan engine, GPS/activity-stats, and export logic with Jest unit tests (17 test files) to keep deterministic plan logic isolated from the AI layer.

EDUCATION

Bachelor of Technology - Information Technology

JSPM's Rajarshi Shahu College of Engineering, Pune, India | CGPA: 8.9 | Graduation year: 2024
